Subject: Electricity Sector modeling and non-modeling table
[Electric System Model Types 20150918.xlsx](#)

Hey Robyn,

Sorry about the delay in getting this back to you, relative to yesterday's promise. A few hiccups on other counts along the way. This version is a little re-jiggered beyond our conversation the other day, but I think it captures everything that we talked about and more. I've added a row "description" that covers a lot of ground, as well as "typical users." I've also scratched a few previous rows, and eliminated as many redundancies as possible. You'll see that "strengths and weaknesses" has migrated to "compliance planning considerations", which gradually ramps from things that non-modeling approaches do badly to things that they do well.

Hope this hits it.

Thanks

-Jeremy
